INTRATRADE

Trading App Commercial Proposal

Proposal for a production-ready trading platform that combines live market data, multi-strategy execution workflow, options and futures contract mapping, reporting, and future broker API integration.

Client Proposal + Scope + Commercial Summary

Executive Summary

This proposal presents a structured trading application designed to support live market monitoring, strategy-based trade generation, paper execution, reporting, and future broker connectivity. The platform is suitable for internal desks, trading operations teams, and semi-automated research workflows.

Solution Overview

Frontend Layer
Streamlit dashboard for strategy controls, live charts, execution review, and reporting.

Application Layer
Python-based strategy engine, signal flow, futures/options mapping, execution engine, and reporting logic.

Data Layer
Yahoo OHLCV, NSE option-chain inputs, NSE futures data, CSV backtest files, and rule-based scoring.

Operations Layer
Paper execution logs, Telegram alerts, PDF/CSV reports, and future broker API adapters.

Scope of Work

Included Scope

- Trading dashboard for live analysis and strategy control
- Support for breakout, demand-supply, indicator, one-trade-day, and MTF strategies
- Options contract selection and futures contract mode
- Paper trading workflow and execution logs
- Telegram alert integration
- CSV, HTML, and PDF reporting outputs
- Deployment-ready documentation and operational runbook

Optional Add-ons

- Broker API live order integration
- Cloud deployment and monitoring
- Authentication and role-based access
- Database-backed execution history
- Advanced analytics and trader performance dashboards

Implementation Phases

Phase	Focus	Outcome
Phase 1	Core platform	Dashboard, strategies, paper execution, reporting

Phase 2	Production hardening	Deployment setup, security controls, scheduling, backups
Phase 3	Broker integration	Live order routing, validation, execution audit trail
Phase 4	Scale and analytics	Monitoring, persistence, multi-user operations, advanced insights

Commercial Summary

Starter Implementation

Custom Quote

Recommended when scope is finalized after business discussion.

Suggested Pricing Model

Phase-based delivery with milestone approvals for architecture, deployment readiness, and live integration.

Indicative Commercial Options

Package	Description	Commercial Style
Foundation	Dashboard, strategies, paper trading, reports	Fixed milestone pricing
Professional	Foundation plus production deployment and operations	Fixed milestone pricing
Enterprise	Professional plus broker integration and monitoring	Custom engagement pricing

Assumptions

- Live broker integration is handled as a later phase after paper validation
- Market data provider access remains available from approved sources
- Client branding assets can be added once logo and identity files are shared

- Final commercials will depend on deployment environment and broker requirements
